

D

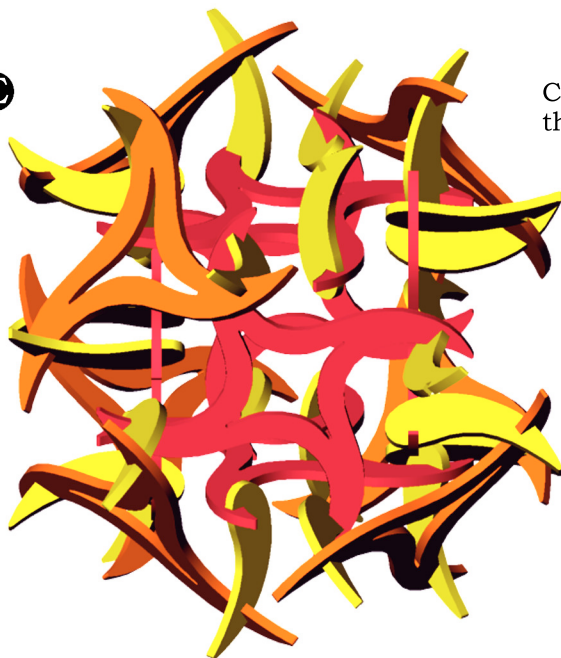

Add four more assemblies, each hooking onto two orange slots. Figure D shows two of the four in place.

Next, fit three of the remaining triples onto the open connector slots.

E

Carefully move the last quadruple assembly into the interior, where it fits onto three orange slots.

After assembling, check that each joint is in place and clean. If you used rubber bands to hold some joints together, leave them on.

Let the glue dry for 6 hours. Then clip off the bands if you used any, and your sculpture is ready to display.

Optionally, gloss can be added with a light coat of spray-on shellac

F

And the final triple closes the piece.

It's easier to assemble *Sun Star* standing on a fourfold side, but when finished I like to stand it up on a triple.
